Summary

Final-year B.Tech (AI & DS) student with experience in **MLOps, AI engineering, and full-stack development**. Built ML pipelines, multi-agent AI systems, and scalable web applications. **Published researcher** in AI-generated image watermarking. Seeking roles in **AI/ML, MLOps, or Data Engineering**.

Education

AISSMS Institute of Information Technology, Pune

Aug 2023 – May 2027

B.Tech in Artificial Intelligence & Data Science | CGPA: 8.62 / 10.0

Experience

YCS Tech | SDE Intern

Aug 2025 – Feb 2026

Pune, Maharashtra | Full-time, On-site

- Built a full-stack **Task Management Dashboard** using **Next.js**, implementing real-time state persistence and optimised UI rendering for **3+ concurrent client workflows**.
- Led end-to-end development of a **Battery Simulation Platform** (Next.js + FastAPI) enabling real-time parameter computation and visualisation for industrial testing; packaged as a **Windows .exe** via Electron, reducing manual setup time to **under 2 minutes**.
- Optimised **REST API** pipelines and async processing, reducing average backend response latency by **~30%**.
- Delivered **2 production-ready systems** across **Agile Scrum** sprints with **CI/CD** deployments and direct stakeholder collaboration.

Projects

SmartShelf – MLOps Platform | *XGBoost, LightGBM, FastAPI, Prefect, MLflow, PostgreSQL, BigQuery, Docker*

- Architected a **3-model chained MLOps pipeline** (Demand Forecasting → Price Optimisation → Inventory EOQ) with **85%+ forecast accuracy** and 35+ engineered features.
- Dual-layer data architecture: **PostgreSQL OLTP + BigQuery OLAP**; automated weekly retraining via **Prefect** with full model versioning in **MLflow Registry**.
- Deployed **FastAPI** serving layer with **Prometheus + Grafana** monitoring, containerised via **Docker** with **CI/CD** on GitHub Actions.

NOVA – Agentic AI System | *FastAPI, CrewAI, FAISS, Electron, Firebase*

- Designed a **multi-agent AI system** (CrewAI, 60+ tools) for autonomous task planning with a **RAG pipeline** (FAISS) for semantic retrieval and contextual memory.
- Packaged as a cross-platform desktop app via **Electron** with Firebase auth and real-time data sync.

GradeX – AI Coding Platform | *Next.js, Node.js, AWS EC2, OpenRouter, Docker*

- Real-time multiplayer coding platform with ELO matchmaking, **LLM-driven** problem generation (OpenRouter), and sandboxed code execution on **Docker + AWS EC2**.

Research & Publications

Invisible Watermarking for AI-Generated Images | *IJSREM*

April 2026

Co-author: Atharva Deo | Guide: Dr. D.S. Zingade, AISSMS IOIT

- First comparative study of **Spatial vs. Transform Domain** watermarking on **Stable Diffusion XL** outputs for deepfake detection, IP protection, and AI content authenticity.

Achievements

- 3× Winner** – Coding Relay (AISSMS, Keystone) and Blind Coding at inter-college fests.
- Top-3 Finishes** – 2nd in Hack the Template & Code Hunt; 3rd in Bit by Bit. **7+ hackathons** participated.

Technical Skills

Languages: Python, C++, JavaScript, TypeScript, SQL

AI / ML: Machine Learning, Deep Learning, NLP, RAG, XGBoost, LightGBM, scikit-learn, FAISS

MLOps & Data: MLflow, Prefect, ETL Pipelines, Feature Engineering, Evidently, Prometheus, Grafana, BigQuery

Frameworks & DBs: FastAPI, Next.js, React, Node.js, CrewAI, PostgreSQL, MongoDB, Firebase

DevOps & Tools: Docker, CI/CD (GitHub Actions), Git, REST APIs, AWS EC2, Electron

Core CS: DSA, System Design, OOP, OS, Computer Networks

Leadership & Responsibility

- ML Head, AI & DS Dept.** – Organised ML/GenAI workshops and mentored peers on AI projects.
- Published Researcher** – Co-authored a peer-reviewed paper on AI content authentication and digital watermarking.
